SKILLS & TOOLS

- **Skills:** Python, SQL, Zapier, Tableau, Looker, Alteryx, JavaScript, Figma, Git, Discord, Slack, Trello, Tableau Server, API.
- **Analytics & Method:** Data Cleaning, ETL, Statistical Modeling, A/B testing, Hypothesis Testing, Machine Learning

WORK EXPERIENCE

Business Analyst

Jan. 2024 – April 2025

Schneider Electric

EPZA, Cavite, Philippines

- Utilized Tableau to create interactive dashboards and reports, effectively communicating data-driven insights to stakeholders.
- Executed data preprocessing tasks, including data cleansing, transformation, and integration, to prepare data for analysis and reporting.
- Utilized advanced analytics techniques and Large Language Models (LLMs) to extract patterns, identify trends, and automate insights from complex datasets.

Data Scientist Intern

Feb. 2023 – Oct. 2023

Esco Lifescience

Remote

- Developed functional scripts to enhance workflow efficiency and solve business problems.
- Assist in building and implementing machine learning models under the guidance of senior data scientists.
- Trained employees in the use of CVAT.ai to ensure accurate and consistent annotations.

LSL Counseling and Testing Center - (Project Based)

May. 2023 – Aug. 2023

IT Programmer

Davao City

- Implemented automation solutions, streamlining repetitive tasks and optimizing resource allocation.
- Designed and developed an informative website, providing valuable resources and enhancing communication channels.

EDUCATION

Bachelor of Science in Computer Science

July 2023

Mapua Malayan Colleges Mindanao

Davao City, Philippines

- Magna Cum Laude & Silver Medal Awardee; Academic Excellence Award Scholarship; Delivered technical support as a student assistant and Computing Student Society member as an honorary council and facilitator.

CERTIFICATIONS & AWARDS

- **Certifications:** Statistical Analysis and Modeling Using SQL and Python; Discrete Math and Analyzing Social Graphs; Introduction to Data Science in Python.
- **Awards:**
 - Mindanao Conference for IT Students 2023** - 1st Runner-up - Philippine Society of Information Technology
 - Philippine Junior Data Science Challenge 2022** - 2nd Runner-up - UP Diliman Data Science Society
 - Reimagined: Advocacies in the New Normal 2021** - Champion - MMCM Center for Office for Research, Development, and Innovation

PROJECTS

All projects information available on: <https://kvgolosinda.github.io/portfolio/>

North America Community Workforce Insights & Statistics Environment (NAM C.T. W.I.S.E) Dashboard

Tools: Tableau, Alteryx.

NAM CT WISE is a tableau dashboard that creates a single source of truth for North America Community Team (NAM CT) Workforce Management (WFM) KPIs and statistics. It provides essential visibility for both WFM teams and Operations leaders, ensuring data standardization, availability, and accuracy.

Visibility Into Sales COE Trends & Analysis (V.I.S.T.A) Dashboard

Tools: Tableau, Alteryx, Excel, SQL.

VISTA Dashboard provides clear visibility into revenue contribution, the single source of truth for sales performance data. It empowers leaders and their teams to make informed, data-driven decisions that enhance sales strategy and execution.

Social Media Chatbot

Tools: Zapier, Python.

Designed and deployed an automated chatbot that integrates with social media platforms through Zapier. Streamlined customer engagement by automating responses, lead capture, and message routing between Discord, Slack, and Google Sheets—reducing manual handling time and improving response efficiency.

Data Preparation and Workflow Automation

Tools: Alteryx.

Designed and implemented automated data workflows in Alteryx to streamline data preparation and integration from multiple business sources. The workflows handled data cleansing, transformation, and aggregation, significantly reducing manual effort and ensuring consistent data quality for reporting. Processed datasets were seamlessly connected to Tableau dashboards, enhancing real-time analytics and accuracy across business units.

PUBLICATION

DriSafePh: An IoT Based Realtime Driver Drowsiness Detection System using Hybrid Machine learning Algorithm

Developed an embedded real-time driver drowsiness detection system using a hybrid machine learning algorithm that analyzes facial landmarks and gestures to detect fatigue. Implemented on a Raspberry Pi device with text-to-speech alerts to warn drivers. Achieved 96–99% accuracy in face, eye, and mouth detection, demonstrating strong potential for low-cost road safety applications.
